

When our customers ask,
“Can you help us get LEED certified?”
We say, YES.

Stonhard will work with you to achieve LEED certification by offering you innovative products to assist in attaining points. In addition to the points, Stonhard maintains a big-picture commitment to producing floor systems that meet demands for both form function and environmental responsibility. How do we do this?

- Our floors are formulated, manufactured and installed with sustainability in mind. Our products become part of a building rather than end up in a landfill at the end of their life.
- We save thousands of gallons of water and prevent harsh chemicals, waxes and detergents from ending up in the waste stream because Stonhard floors are low maintenance.
- Stonhard’s unique packaging prevents 4.8 million gallon pails and quart cans from being dumped into landfills annually.

Despite the many years of making sustainability a priority, the mission continues. It’s really about our commitment to think beyond the here and now of our environment.

Stonhard works with you to achieve certification.

The following are LEED points where Stonhard can help your project become LEED Certified.

Material and Resources

- MR Credit 1 Building Reuse
 - ♦ Stonhard flooring systems can be used to rehabilitate an existing building and lessen the need for new facilities.
- MR Credit 2 Construction Waste Management
 - ♦ Reduce waste up to 85% through Stonhard's unique packaging by minimizing metal can waste and recyclable packaging.
- MR Credit 4.1 Recycled Content
 - ♦ Stonhard offers products formulated using recycled glass aggregate.
- MR Credit 5 Regional Materials
 - ♦ Stonhard meets the requirements of a regional supplier with manufacturing facilities within 500 miles from most of our customers.
 - ♦ All Stonhard products are assembled on site and qualify as regionally manufactured materials.
- MR Credit 6 Rapidly Renewable Materials
 - ♦ Stonhard offers products that are formulated and designed with rapidly renewable bio-based materials.

Indoor Environmental Quality

- EQ Credit 4.2 Low Emitting Materials
 - ♦ Most of Stonhard's products meet and exceed VOC requirements for floor coatings.

So, yes we can and will help our customers get LEED certified.
